

gardening with Native Plants

You can make a difference by simply landscaping with native plants, also known as naturescaping. The Pacific Northwest has a spectacular variety of beautiful and interesting plants that can be used to control erosion, increase stormwater infiltration, reduce watering, and reduce or eliminate chemical use while enhancing the aesthetics of your landscape.

Naturescape for clean rivers and for wildlife habitat. Native plants are adapted to our climate and naturally resistant to native pests and diseases. They require less water and need no chemical applications for them to thrive. Naturescaping reduces polluted stormwater runoff, which improves water quality in our streams.

 Replace invasive plants such as English ivy, Scotch broom, and Himalayan blackberry with native plants.
